

# Building Library Capacity for Managing Data: Roles and Competencies in an Open Landscape

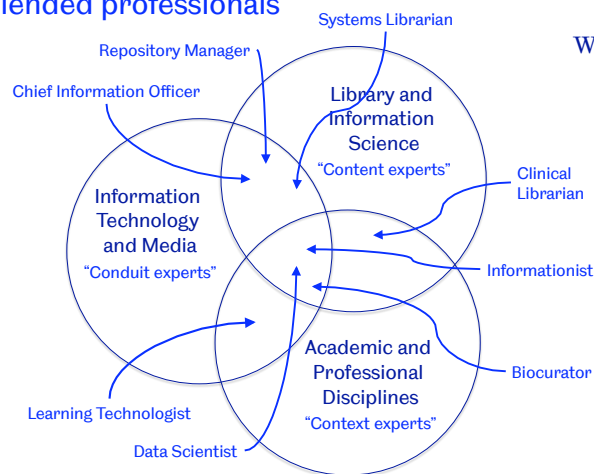

*Making sense of the challenges and opportunities for library and information professionals (work in progress)*

## Service trends in the network world

Information professionals are expected to deliver a diverse portfolio of highly specialised services (Corrall, 2005)

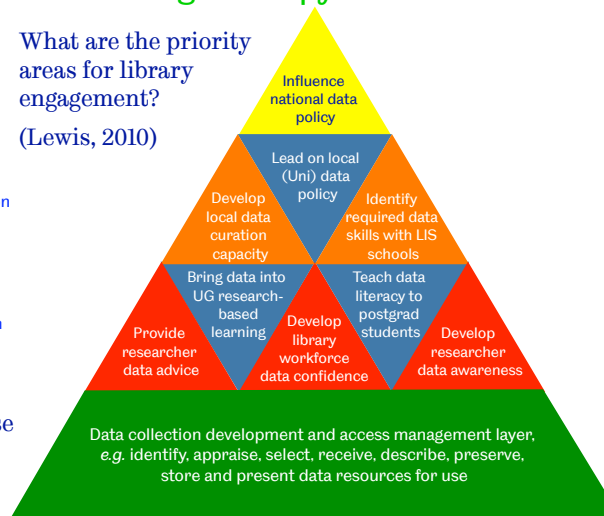

## Blended professionals

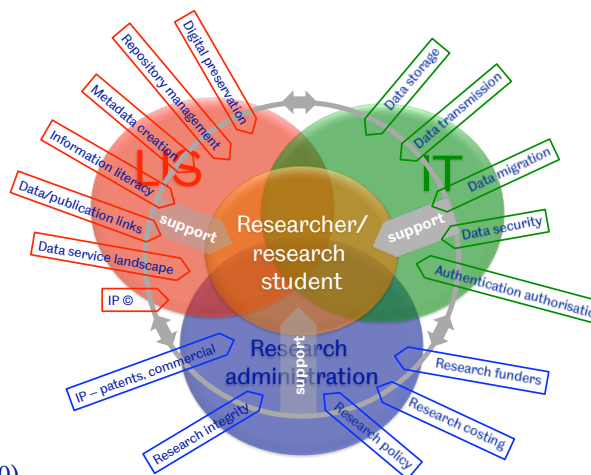

Blended specialist roles have emerged at the boundaries of established professions (Corrall & Lester, 1996; Corrall, 2010)

## Data management pyramid for libraries

What are the priority areas for library engagement?  
(Lewis, 2010)

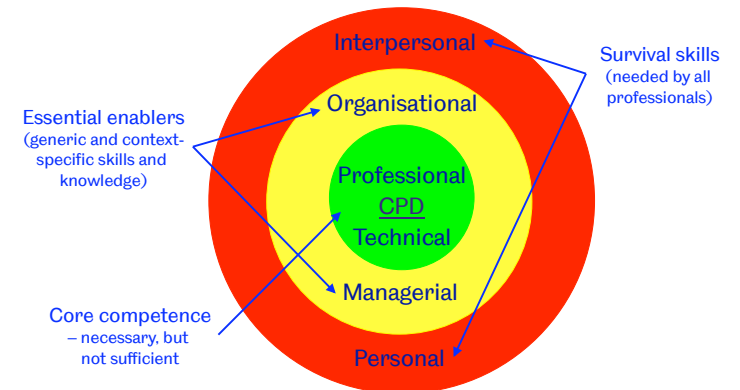

Where should libraries lead? Where should they seek partners?

## Collaborative service development

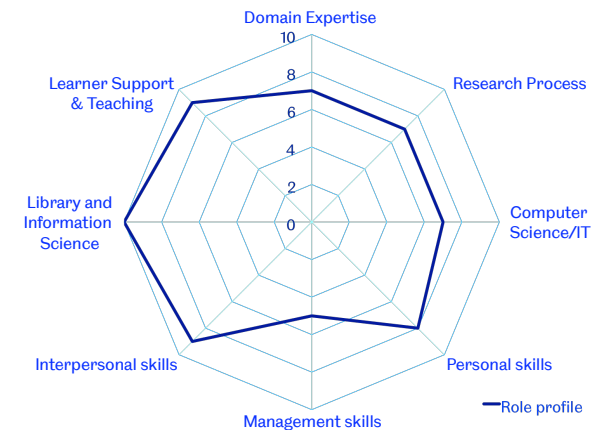

## Professional competence

Professionals need an array of other competencies to support their specialist expertise (Corrall, 2005; Skelton & Abell, 2001)

## Skills profiles

## Data Literacy Educator

How much do the knowledge and skills requirements vary for different specialist roles in data management?
