Purpose

The cost of textbooks has increasingly become a financial burden on students. On average, students can expect to spend over $1,200 annually just on books and supplies (National Center for Education Statistics - Digest of Education Statistics). The Hillman Library Textbook Reserves Pilot Program was developed in response; making multiple copies of textbooks available to students for selected courses.

Findings

Approximately 910 items were on course reserve for the Fall 2018 term. Total circulation for all items was 3,622; and textbooks in the pilot, circulated 457 times. Textbook pilot items accounted for 4.7% of the total number of items on reserve and 12.5% of all the circulations. Three of the four pilot courses were in the top 10 - circulations per course. See diagram “Total transactions (uses) per title compared to number of copies on reserve” for more information.

- Average circulation for books in the pilot was higher than the average circulation for all other Hillman reserves. The most expensive book in the pilot (Operations Management text - $293) had a much lower than average circulation compared to the other pilot texts and Hillman reserves. See “Cost Effectiveness of Pilot Texts” diagram for more information.
- Out of 2,319 students enrolled in the pilot courses, only 42 responded to the survey (~2% response rate). The American Constitutional Law course had the highest ratio of responses (N=8, 23% response rate). Based on the survey results, most students found out about the library copy from their instructor, during the first week of class.

Recommendations

- Important to have faculty engagement early in the process to identify potential textbooks for reserve and promote usage of the texts to their students.
- Imperative to alert students to the availability of the library texts in a timely manner (before they purchase). Examine best methods for publicizing the availability of reserve texts prior to students purchasing.
- Continue to monitor trends in course reserve circs to identify particular courses/subjects/etc. that have high circulation to textbook copy ratios. See “Future Investigations” and “Top Courses by Fall 2018 Circulation Counts” diagrams for more information.
- Research other methods for identifying textbooks for reserve that would have the greatest return on investment.
- Refine criteria for textbook reserve purchases and methodology for balancing number of copies available with demand and assess the impact of any changes.
- Collect additional feedback from faculty and students to make sure our efforts are matching their needs, and map efforts to student outcomes.

Design

To select textbooks for the pilot, ULS staff reviewed lists provided by the book store, enrollment size, frequency of the class offerings, liaison recommendations and faculty initiated purchase requests for reserve. To determine the number of copies to purchase, staff considered cost, enrollment, & expected demand.

Four courses were chosen:
